# User Manual: Activity Monitor Handler

This is a step by step guide on how to run and use our application.

1. Extract the zip file
2. Open Terminal with the correct path (path to the location of the extracted folder)
3. Type into the Terminal: **gcc -o hw.o hwmonitor.c** to compile the project
4. Then type into the Terminal: **./hw.o** to run the program

After starting, you will be asked two parameters, which you can choose accordingly:

5. Now the Programm will be running in the background. In case you have a process using a lot of CPU, you will be alerted with this window:

In case you choose to kill the process, it will be killed. If you choose to suspend the process, another window will pop up and you will be asked for how long you want to suspend the process. Similarly for ignoring the process, you will also be asked for your preferred ignore-duration.
